

Advisory regarding submission of study analysis report by Co-located Hybrid power projects towards identification of Connectivity quantum

RE Connectivity applicants/grantees, who are implementing co-located hybrid projects viz. Wind & Solar, shall submit the detailed analysis/ simulation report of the generation profile under different scenarios across the year. The report shall provide details regarding maximum possible simultaneous power injection into the Grid under any profile. The Quantum of connectivity for such hybrid projects shall be based on the furnished analysis/simulation report regarding maximum possible simultaneous power injection into the Grid.

The detailed analysis/report as above shall be submitted along with Connectivity application or on request of CTU (in case application is already submitted without analysis/report).
